Jim

A colleague of mine will be in Amherst tomorrow on a service call at U Mass and may give you a call to stop by if he has time, if that's OK with you.

His name is Frank Querzoli.

Hi Bob,

That's the first thing we replaced when we noticed the problem (had a spare). We will vent the 5972 first thing tomorrow and check for ground and bad connections. I'll let you know how we make out. If you have any more ideas just email.

Thanks,

Jim

Hi Jim,

Just another thought. The lens insulator Part G3170-20530 (\$330.00) could also cause some problems with shorting out the lenses due to age. If you want I can send you one to try. Unfortunately if it doesn't fix the problem, you own it.

Or just wait for me to come in.

Either way let me know.

Thanks,

Bob
